DOCKET CONTROL

Dear Commissioners:

I **oppose** the APS TS-5 to TS-9 500 kV power lines along the CAP in the northern section of Vistancia Village and have joined forces with my fellow neighbors in Vistancia, Trilogy and Blackstone to express my opposition.

One of the worst views of the west valley, and the entrance to Vistancia are the power lines one must go under to get to the community. Now, the proposal is to hem in the community with additional power lines to the north. This is unacceptable.

Our community will be negatively impacted by the CAP proposed alignment as it will:
Threaten the health of the residents, adults and children by being
extremely close to the future elementary school, and the homes (current and future)
Adversely affect property values,
Destroy one of Peoria Arizona's best northern view corridors.

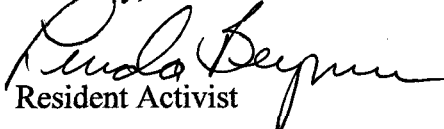

Residents purchasing property as recently as October 7, 2007 have not been provided full disclosure of the potential placement of power lines as required by the Arizona Association of REALTORS. The Seller Disclosure Advisory calls for disclosure of information that "*might affect the buyer's decision-making process, the value of the property...*"

The residents of our community will take all necessary action to protect the health of our families, our scenic mountain views and property values.

Alternatively, we support of the placement of the power distribution lines along the Carefree Highway.

Again, I reject the proposed alignment of power lines through Vistancia.

Sincerely,

Resident Activist

Phoenix, Arizona 85072-3933

Dear Mr. DeWitt:

We have joined forces with my fellow neighbors to express opposition of the APS TS-5 to TS-9 500 kV power lines along the CAP in the northern section of Vistancia Village. Our community will be negatively impacted by this proposed alignment.

We know you have received many letters about the opposition of the APS power lines but were disturbed to learn you don't consider the residents of Vistancia as having said much about the situation. Please hear us loud and clear. We live in a very beautiful area and paid plenty live here. If routes around the subdivision are possible then it seems those would be more logical and accepted.

The predominant opinion of the Vistancia Village, Trilogy and Blackstone residents supports placement of the power distribution lines along the Carefree Highway.

The ultimate goal of our community is to protect the health of our families, our scenic mountain views and property values. Our community will take all action necessary to reject alignment of power lines through Vistancia.

Sincerely,

Arthur and Sandra Osier
Resident Activist

Re: TS-5 to TS-9 500kv Transmission Project

Dear Mr. DeWitt:

We live in Trilogy which is part of the Vistancia master planned community. We are very opposed to any routing of the above-referenced electrical lines coming through this community.

There are many other routes which have been identified, i.e. the Carefree Highway route, which is the alignment we support. Here in Vistancia we already have large power poles and huge electrical supports. We shouldn't be burdened with more.

Vistancia is an award-winning master planned community that will encompass over 14,000 homes when completed, as well as many acres of commercial property. This development has been planned and approved for many years. Why do you now feel it is necessary to disrupt this existing community with the addition of more electrical structures? A less disruptive solution would be to use the Carefree Highway corridor.

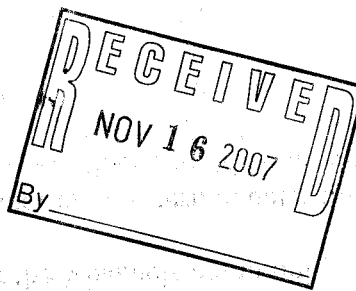

Thank you for including our comments.

Sincerely,

A handwritten signature in cursive script that reads "Donna Hanna".

Dear Mr. DeWitt:

I am strongly opposed to the APS TS-5 to TS-9 500 kV power lines being located in the northern section of Vistancia Village. I live in Trilogy at Vistancia. The alignment of these power lines close to where I live would have an extreme negative impact on the entire community where I live.

The unsightly appearance of power lines is the LEAST of my concerns. My strongest concern is the health issues related to living near power lines. I moved to Arizona from Fresno, California. In Fresno, Slater Elementary School is located near power lines. There has been a significantly higher rate of cancer among the students and teachers at Slater Elementary School in Fresno.

I am aware of numerous studies that have documented a relation between living close to power lines and a significantly increased occurrence of cancer. Even the U.S. National Council on Radiation Protection has stated: "There is a powerful body of impressive evidence showing that even low exposure to electromagnetic radiation has long-term effects on health." Some of the listed effects are sudden infant death syndrome, changes in brain chemistry, impaired immune systems, inhibition of melatonin production which suppresses certain cancers. Because of these serious health concerns, I am strongly opposed to the placement of power lines near the Vistancia community.

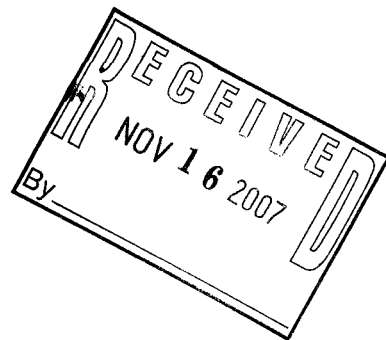

The health and safety of people should be the most important concern in determining the placement of these power lines. Therefore, the placement of these power lines should be far away from areas where homes and schools are located. One such location is along the Carefree highway. It makes no sense whatsoever to place future power lines near homes and schools. Especially when there are potential locations that contain few homes. I urge you to place the health and safety of people above all other concerns and select a location for the power lines far away from homes and schools.

Because of the health and safety concerns previously mentioned, I oppose the placement of these power lines near the Vistancia community and I will join the other members of the Vistancia community to take all necessary action to oppose the alignment of power lines through Vistancia.

Sincerely,

Rita Day, resident of Trilogy at Vistancia

Dear Mr. DeWitt:

I have joined forces with my fellow neighbors to express opposition of the APS TS-5 to TS-9 500 kV power lines along the CAP in the northern section of Vistancia Village. Our community will be negatively impacted by this proposed alignment as you have learned from the numerous communications that you have already received from concerned residents.

I will not waste your time by restating what you have already been told. I'm writing this letter to make sure that you are aware that I am strongly opposed to the power lines coming anywhere close to Vistancia and I wanted by concerns to be on record.

The predominant opinion of the Vistancia Village, Trilogy and Blackstone residents supports placement of the power distribution lines along the Carefree Highway and I support this proposed alternate route.

The ultimate goal of our community is to protect the health of our families, our scenic mountain views and property values. Our community will take all action necessary to reject alignment of power lines through Vistancia.

Sincerely,

Dear Mr. DeWitt:

I have joined forces with my fellow neighbors to express opposition of the APS TS-5 to TS-9 500 kV power lines along the CAP in the northern section of Vistancia Village. Our community will be negatively impacted by this proposed alignment.

Numerous studies across the globe confirm the occurrence of clustered health issues in residents living near power lines. A study by physicists at Britain's University of Bristol shows that "power lines attract particles of radon—a colorless, odorless gas irrefutably linked with cancer." Epidemiologist Nancy Werth's study revealed "the occurrence of childhood leukemia in the Denver, Colorado area tended to cluster along and follow the path of power distribution lines..." Epidemiology studies by Nancy Wetheimer and Edward Leeper showed an "enhanced rate of leukemia for children." A report by the United States National Council on Radiation Protection stated, "There is a powerful body of impressive evidence showing that even low exposure to electromagnetic radiation has long-term effects on health." Some effects listed include Sudden Infant Death, changes in brain chemistry, impairment of immune systems, and inhibition of melatonin production which suppresses certain cancers.

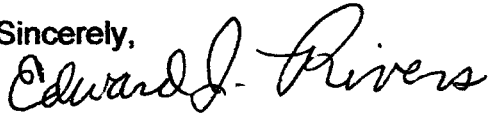

The proposed alignment along the CAP places the power lines within extremely close proximity to the future elementary school, jeopardizing the health and well-being of students, faculty and administrators. Likewise, this proposed alignment threatens the health of all families whose homes are positioned along this route.

Residents purchasing property as recently as October 7, 2007 have not been provided full disclosure of the potential placement of power lines as required by the Arizona Association of REALTORS, whose Seller Disclosure Advisory calls for disclosure of information that "might affect the buyer's decision-making process, the value of the property..." Therefore, residents have purchased homes with high expectations of existing and future property values, and pristine scenic views.

The predominant opinion of the Vistancia Village, Trilogy and Blackstone residents supports placement of the power distribution lines along the Carefree Highway.

The ultimate goal of our community is to protect the health of our families, our scenic mountain views and property values. Our community will take all action necessary to reject alignment of power lines through Vistancia.

Sincerely,

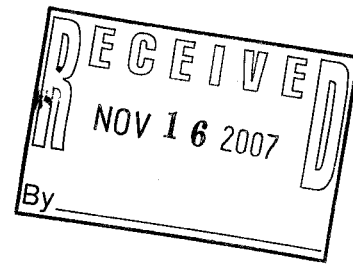

A handwritten signature in cursive script that reads "Edward J. Rivers". The signature is written in black ink and is positioned below the word "Sincerely,".
